WHAT

SAY DEEP LEARNING

imgflip.com

$$= 2,168 + 72,648 + 7,800$$

$$= 76,616 \text{ m}^2 \text{ sec}^{-2}$$

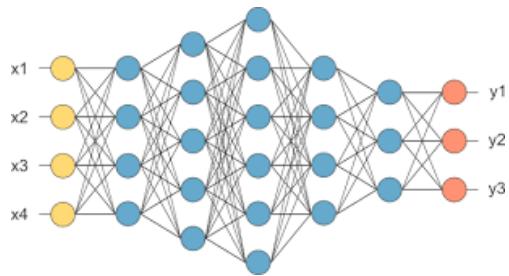

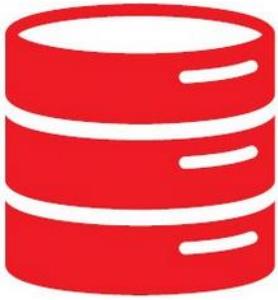

$$\mu_1 = \frac{\mu}{y_1 - y_2} = \frac{2,168 + 72,648}{5^2 - 2^2} \left(\frac{1}{5} - \frac{1}{2} \right) = 0,508$$

$$\mu_2 = \frac{\mu}{y_1 - y_3} = \frac{2,168 + 7,800}{5^2 - 3^2} \left(\frac{1}{5} + \frac{1}{3} \right) = 0,1592$$

$$\mu_3 = \frac{\mu}{y_2 - y_3} = \frac{72,648 + 7,800}{5^2 - 3^2} \left(\frac{1}{3} - \frac{1}{2} \right) = 0,3799$$

$$\mu_1 = 0,41 \quad \mu_2 = 0,508 \quad \mu_3 = 0,609$$

Portuguese Customer Marketing data set

Want to use machine learning to predict what customers are likely to open a new type of bank account.

<https://archive.ics.uci.edu/ml/datasets/Bank+Marketing>

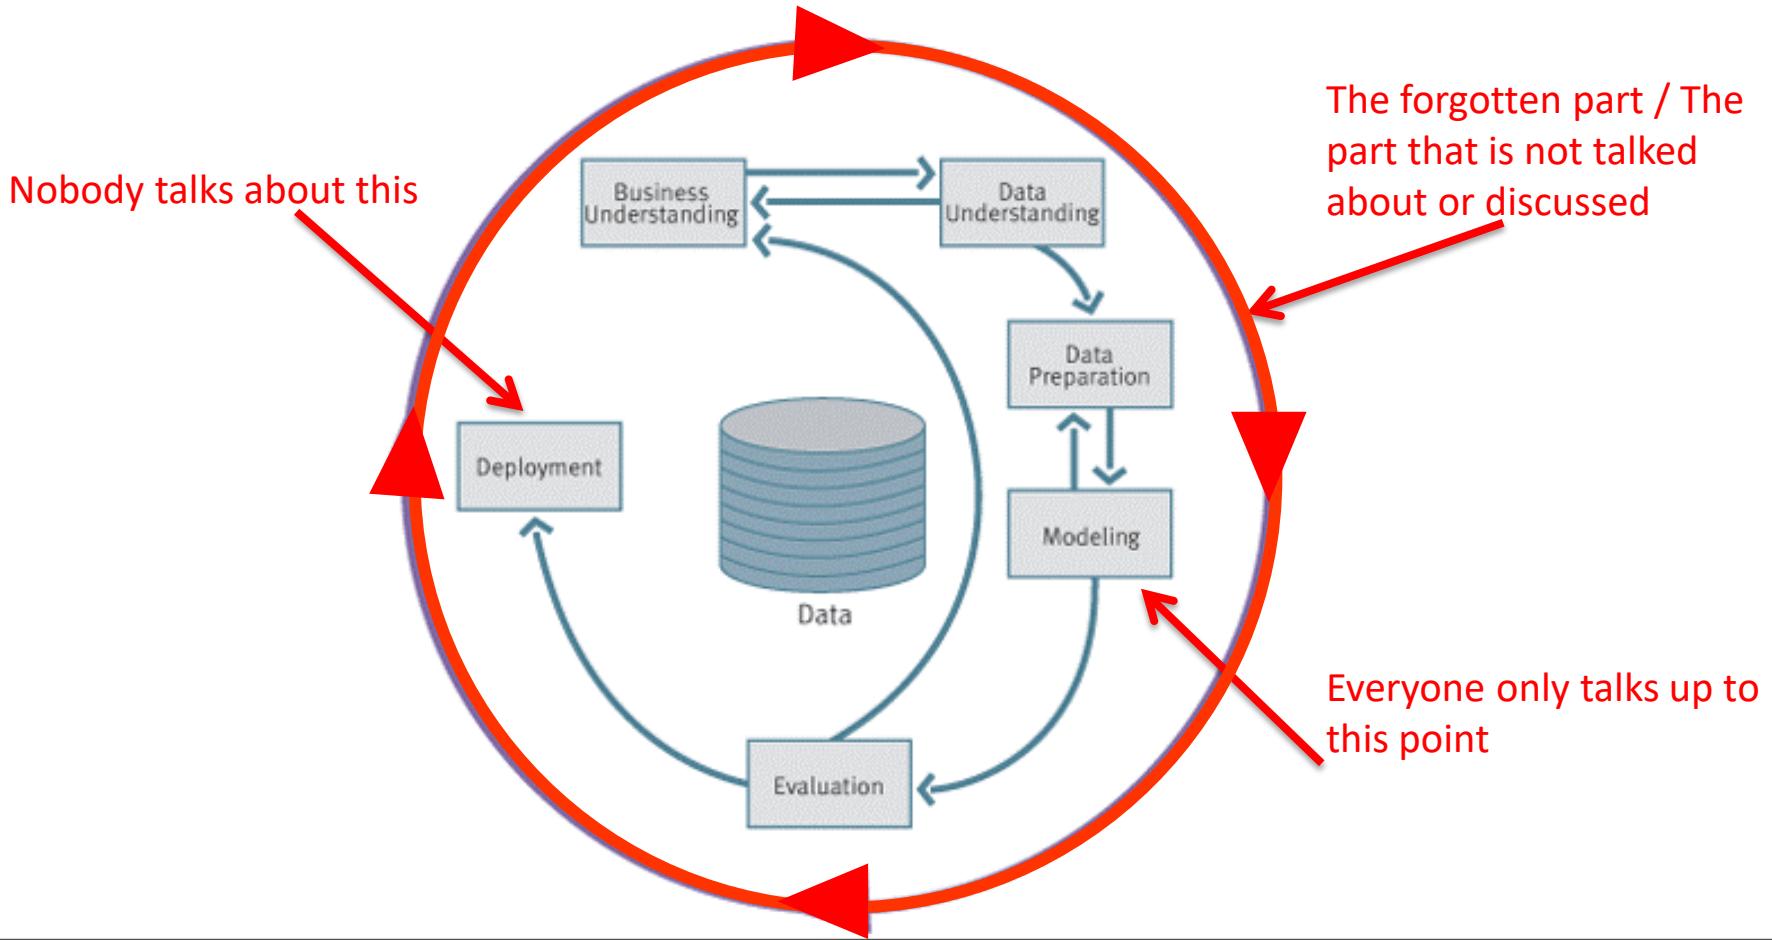

WHY

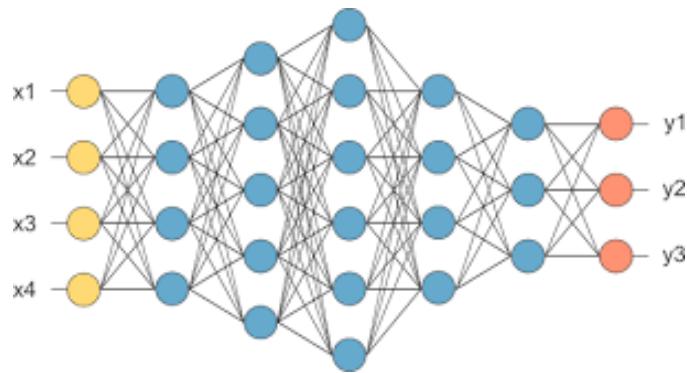

MACHINE LEARNING

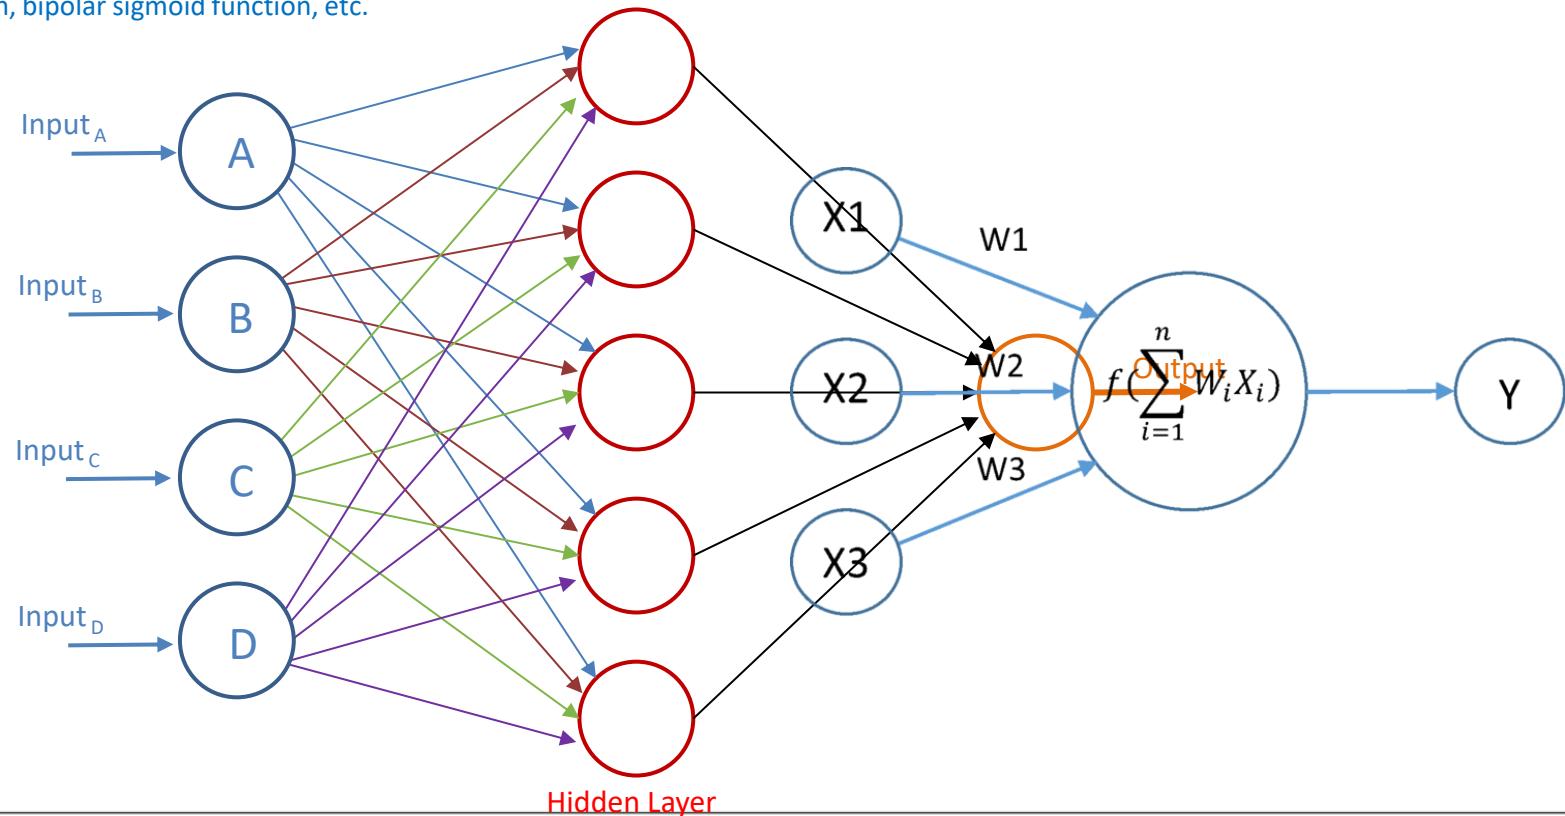

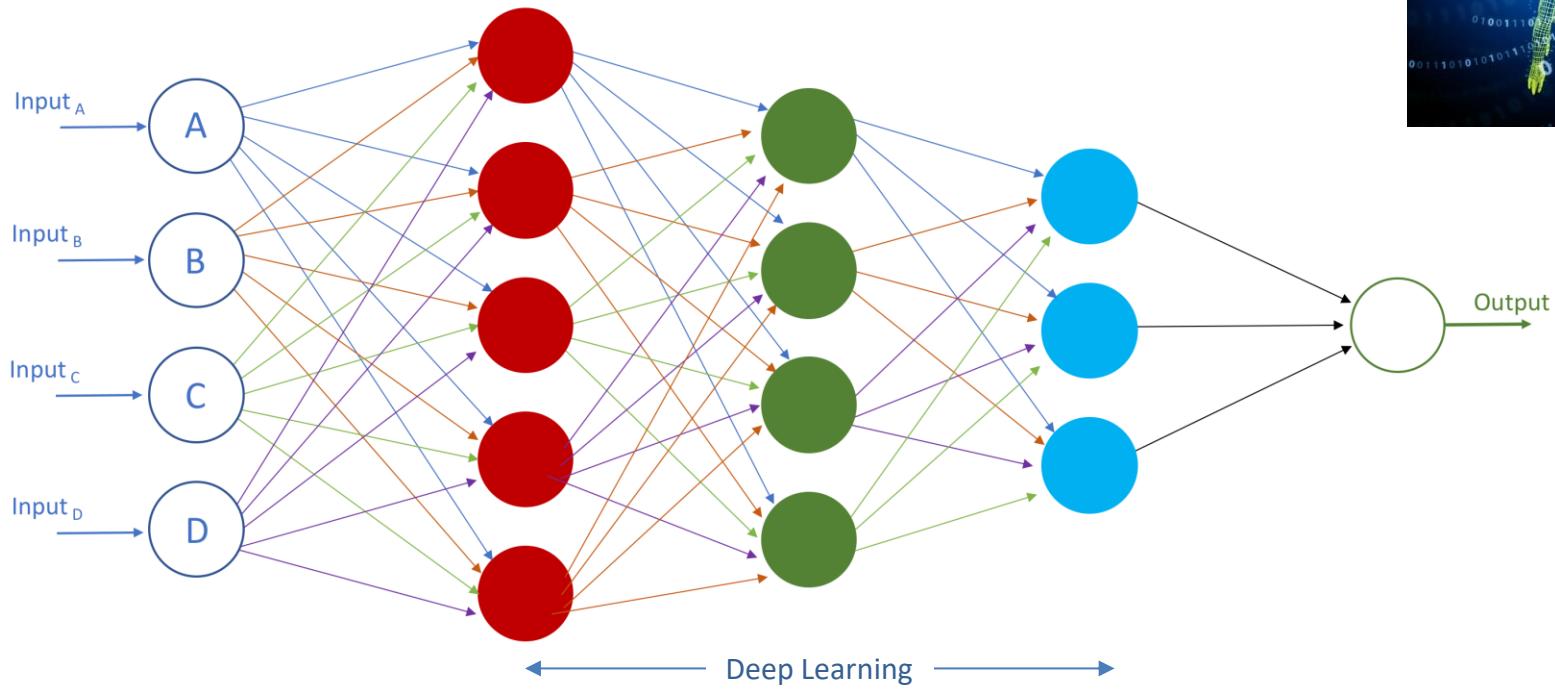

HOW

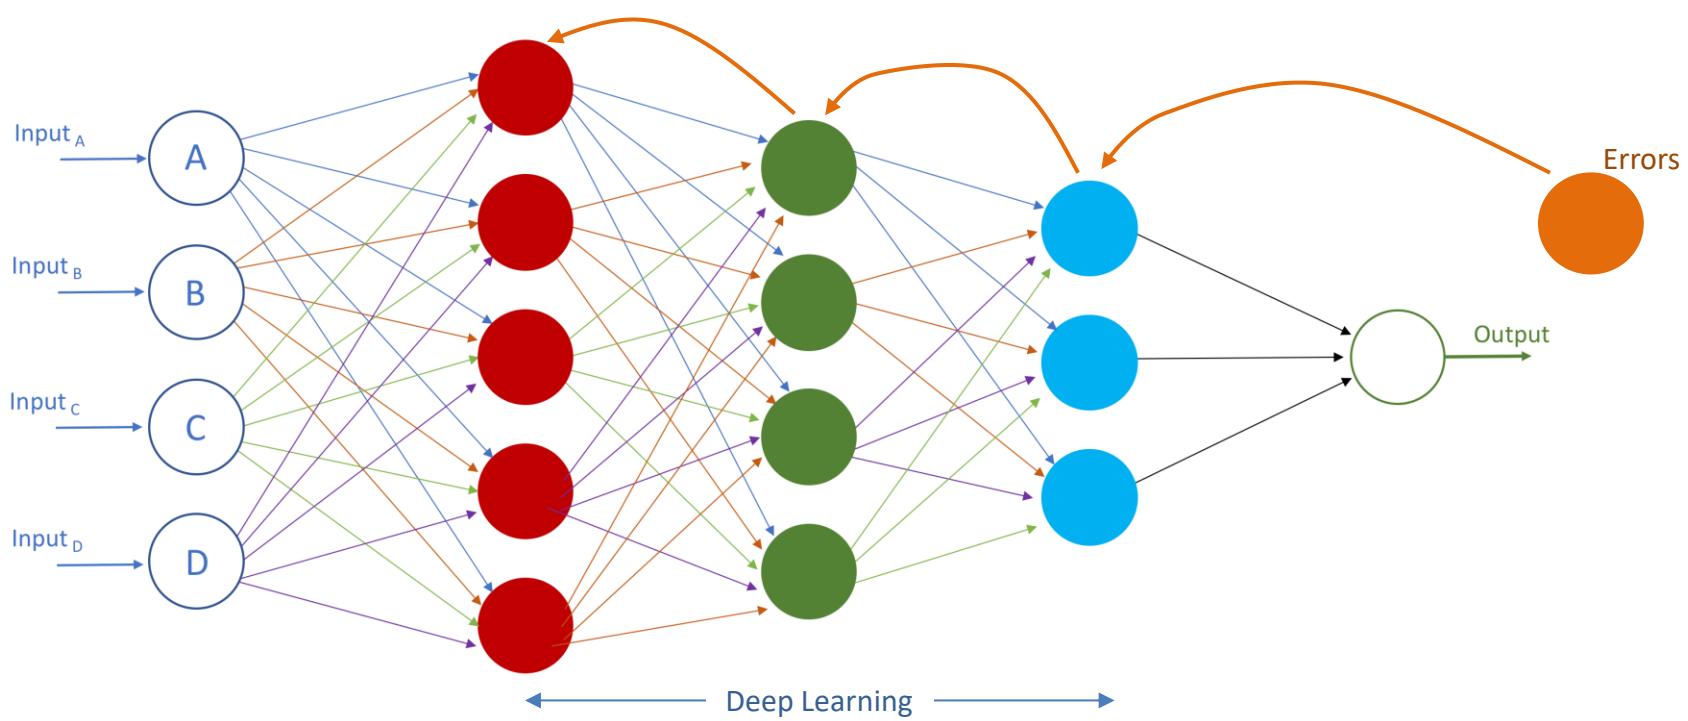

- All the inputs are connected each neuron in the hidden layer (red circles).
- Weights are applied to each input to a neuron
- A neuron takes a set of numeric values as input and maps them to a single output value.
- A neuron is a simple multi-input linear regression function, where the output is passed through an activation function.
 - Two common activations functions are logistic and tanh functions. There are many others including logistic sigmoid function, arctan function, bipolar sigmoid function, etc.

- Additional hidden layers can be added
- The complexity of the computations involved can increases dramatically.
- But the addition of additional hidden layers gives the Neural Network to find additional and at time very complex patterns hidden in the data.
 - Deep Learning
- Each hidden layer finds deeper connections between the different input features
- More hidden layers => more complex processing and time

- Back Propagation Neural Networks
 - Training Data Set and Error rates are fed into the network (hidden layers)
 - The processing at each neuron is updated and the weights rules adjusted to reduce the error rate.
 - The Neural Network model starts by assuming random weights to each of the connections in the network. The algorithm then iteratively updates the weights in the network by showing training data to the network and updating the network weights until the network is optimized, in a generalized way to avoid over fitting.
 - Neural Networks learn and then relearn/update themselves

HOW

do we create a Neural Network Model?

Oracle Machine Learning Algorithms

CLASSIFICATION

- Naïve Bayes
- Logistic Regression (GLM)
- Decision Tree
- Random Forest
- Neural Network
- Support Vector Machine
- Explicit Semantic Analysis

CLUSTERING

- Hierarchical K-Means
- Hierarchical O-Cluster
- Expectation Maximization (EM)

ANOMALY DETECTION

- One-Class SVM

TIME SERIES

- State of the art forecasting using Exponential Smoothing.
- Includes all popular models e.g. Holt-Winters with trends, seasons, irregularity, missing data

REGRESSION

- Linear Model
- Generalized Linear Model
- Support Vector Machine (SVM)
- Stepwise Linear regression
- Neural Network
- LASSO

ATTRIBUTE IMPORTANCE

- Minimum Description Length
- Principal Comp Analysis (PCA)
- Unsupervised Pair-wise KL Div
- CUR decomposition for row & AI

ASSOCIATION RULES

- A priori/ market basket

PREDICTIVE QUERIES

- Predict, cluster, detect, features

SQL ANALYTICS

- SQL Windows, SQL Patterns, SQL Aggregates

FEATURES

- 
- Feature Selection (FS) (SVD)
 - Explicit Semantic Analysis (ESA)

TEXT MINING SUPPORT

- Algorithms support text type
- Tokenization and theme extraction
- Explicit Semantic Analysis (ESA) for document similarity

STATISTICAL FUNCTIONS

- Basic statistics: min, max, median, stdev, t-test, F-test, Pearson's, Chi-Sq, ANOVA, etc.

R PACKAGES

- CRAN R Algorithm Packages through Embedded R Execution
- Spark MLlib algorithm integration

EXPORTABLE ML MODELS

- REST APIs for deployment

Oracle REST Data Services 18.3

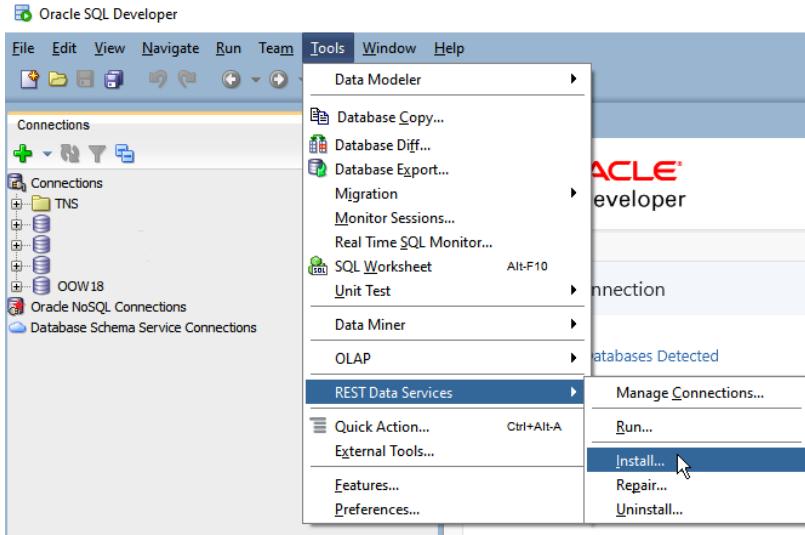

Version 18.3.0.270.1456, October 3, 2018

[Readme](#), [Forum](#), [Documentation](#)

Oracle REST Data Services
(325cd18715256c022f0d4434fb4490e)

59 MB [Download](#)

Install ORDS

unzip the file you downloaded

```
$ java -version  
java version "1.8.0_171"
```

```
$ cd /u01/app/oracle/product/ords  
$ java -jar ords.war install
```

prompted install
(or you can pre-fill a response file)

You don't *need* APEX installed in the DB, but it's a good idea

Install ORDS

This Oracle REST Data Services instance has not yet been configured.
Please complete the following prompts

Enter the location to store configuration data: **/u01/app/oracle/product/ords**

Enter the name of the database server [localhost]: **EE18AHP**

Enter the database listen port [1521]: **1521**

Enter the database service name: **pdb1**

Enter the database password for ORDS_PUBLIC_USER: **parolad0rdine**

Requires SYS AS SYSDBA to verify Oracle REST Data Services schema.

Enter the database password for SYS AS SYSDBA: **change_on_install**

Enter 1 if you want to use PL/SQL Gateway or 2 to skip this step.

If using Oracle Application Express or migrating from mod_plsql then you must enter 1 [1]:

Enter the database password for APEX_PUBLIC_USER: **parolad0rdine**

Enter the database password for APEX_LISTENER: **parolad0rdine**

Enter the database password for APEX_REST_PUBLIC_USER: **parolad0rdine**

.

Completed installation

And VALIDATE the install

\$ java -jar ords.war validate

Start ORDS

```
JAVA_OPTIONS=
"-Dorg.eclipse.jetty.server.Request.maxFormContentSize=2000000"
```

```
cd /u01/ords
```

```
$JAVA_HOME/bin/java ${JAVA_OPTIONS} \
    -jar ords.war standalone > ords.log 2>&1
```

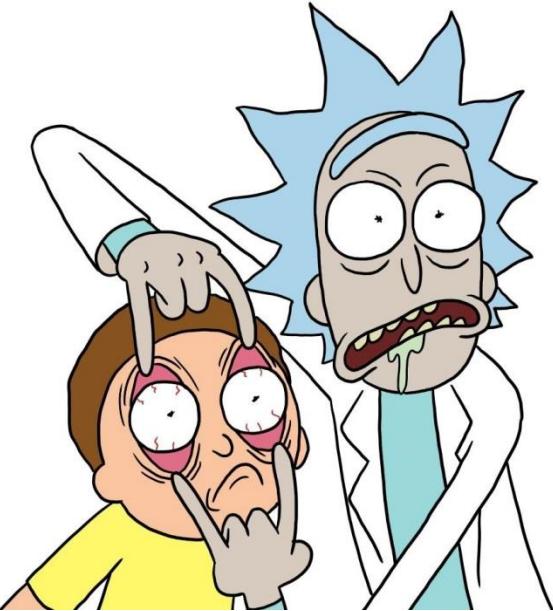

URI: **http://144.21.70.32:8080/ords**

Simple Data Example

```
SELECT * FROM  
schema.countries  
ORDER BY country_iso_code;
```

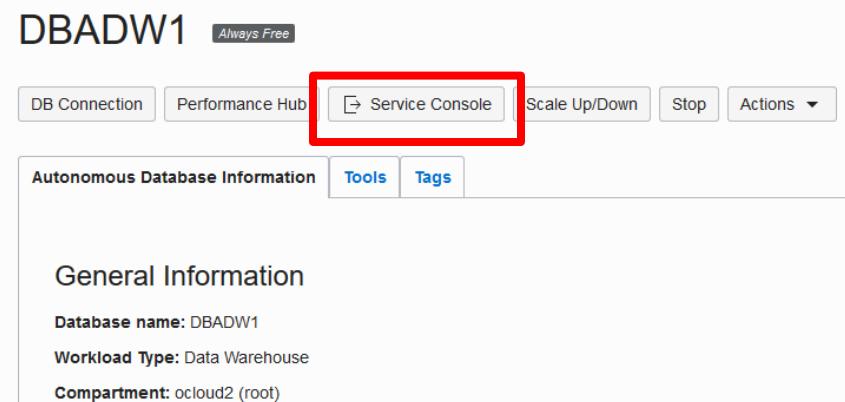

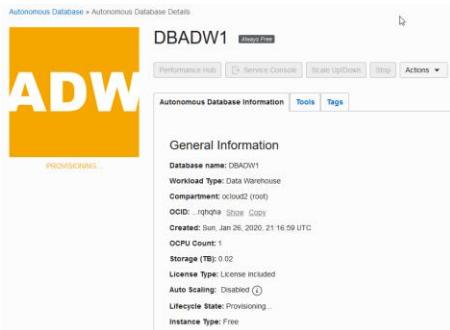

COUNTRY_ID	COUNTRY_ISO_CODE	COUNTRY_NAME
52773	AR	Argentina
52774	AU	Australia
52775	BR	Brazil
52772	CA	Canada
52771	CN	China
52776	DE	Germany
52777	DK	Denmark
52778	ES	Spain
52779	FR	France
52789	GB	United Kingdom
52780	IE	Ireland
52781	IN	India
52770	IT	Italy
52782	JP	Japan
52783	MY	Malaysia
52784	NL	The Netherlands
52785	NZ	New Zealand
52786	PL	Poland
52787	SA	Saudi Arabia
52769	SG	Singapore
52788	TR	Turkey
52790	US	United States of America
52791	ZA	South Africa

AUTOREST for a schema: ORDS.ENABLE_SCHEMA

I wanted to play with ORDS before this talk:

[http://144.21.70.32:8080/ords/.....](http://144.21.70.32:8080/ords/)

Old Cloud DB, and it no longer exists... always free AWD to the rescue!

AUTOREST for a schema: ORDS.ENABLE_SCHEMA

The screenshot shows the Oracle Autonomous Data Warehouse Service Console interface. A red box highlights the 'Service Console' button at the top left. A red arrow points from the bottom left towards the 'Development' tab in the navigation menu, which is also highlighted with a blue background.

Service Console

Autonomous Data Warehouse

Overview

Activity

Administration

Development

DATABASE DBADW1

RESTful Services and SODA

Oracle REST Data Services (ORDS) provides HTTPS interfaces for working with the contents of your Oracle Database in one or more REST enabled schemas.

All ORDS delivered resources for your Autonomous Database will have the following common base URL:

<https://vw8qjvz6dngfhihi-dbadw1.adb.uk-london-1.oraclecloudapps.com/ords/>

Copy URL

Oracle APEX

Oracle APEX is a low code application development framework for building and deploying world-class data centric applications. APEX provides an easy-to-use browser-based environment to load data, manage database objects, develop REST interfaces, and build applications which look and run great on both desktop and mobile devices.

SQL Developer Web

Oracle SQL Developer Web provides a browser-based integrated development environment and administration interface for Oracle Autonomous Database. It provides a subset of the features available in the desktop product.

load data and models, and ORDS enable it. DONE!

AUTOREST for a schema: ORDS.ENABLE_SCHEMA

```

AUTOREST for a schema - **insert**

```
curl -X POST -H "Content-Type: application/json" \
-d '{"country_id":1,"country_iso_code":"UR","country_name":"Uruguay"}' \
http://o-c-a.com/ords/admin/countries/
```

```
select * from countries order by country_id;
```

```
COUNTRY_ID CO COUNTRY_NAME
```

```
-----
```

1	UR	Uruguay
52769	SG	Singapore
52770	IT	Italy
52771	CN	China

```
.
```

```
.
```

AUTOREST for a schema - delete

```
curl -i -X DELETE
```

```
http://o-c-a.com/ords/admin/countries/?q=%7B%22country_iso_code%22%22UR%22%7D
```

HTTP/1.1 **200** OK

Date: Thu, 18 Oct 2018 10:22:42 GMT

Content-Type: application/json

Transfer-Encoding: chunked

```
select * from countries where country_id=1;
```

```
no rows selected
```

AUTOREST Conclusion

- AUTOREST is easy to enable.
Too easy!
You then need to secure it...
- AUTOREST is noticeably slower than defining your REST services explicitly

*Think carefully
before using
AUTOREST!*

Enable REST for a schema

```
BEGIN  
    ORDS.ENABLE_SCHEMA (  
        p_enabled              => TRUE,  
        p_schema                => 'ADMIN',  
        p_url_mapping_type     => 'BASE_PATH',  
        p_auto_rest_auth       => FALSE,  
        p_url_mapping_pattern  => 'admin' );  
    commit;  
END;
```

URI: <http://o-c-a.com/ords/admin/>

Enable REST for a schema

Now we need to create

- a MODULE a container for 1 or more Templates and has a PATH in the URI
- a TEMPLATE unique within a module and has a PATH in the URI
- a HANDLER The actual work bit. The SQL.
- GET, PUT, POST, DELETE - passed in the HTTP header
- a PARAMETER This is optional if you have input binds

URI: `http://o-c-a.com/ords/admin/<module>/<template>?<parameter>=`

Enable REST : Module

```
ORDS.DEFINE_MODULE(  
    p_module_name      => 'neural',  
    p_base_path        => '/neural/',  
    p_items_per_page  => 0,  
    p_status           => 'PUBLISHED',  
    p_comments         => NULL) ;
```

URI: [http://o-c-a.com/ords/admin/**neural**/**<template>**](http://o-c-a.com/ords/admin/neural/<template>)

Enable REST : Template

```
ORDS.DEFINE_TEMPLATE (  
    p_module_name      => 'neural',  
    p_pattern          => 'nw1',  
    p_priority         => 0,  
    p_etag_type        => 'HASH',  
    p_etag_query       => NULL,  
    p_comments         => NULL)
```

URI: <http://o-c-a.com/ords/admin/neural/nw1>

Enable REST : Handler (an action for the Template)

```
ORDS.DEFINE_HANDLER(
    p_module_name      => 'neural',
    p_pattern          => 'nw1',
    p_method           => 'GET',
    p_source_type      => 'json/collection',
    p_items_per_page   => 5,
    p_mimes_allowed    => '',
    p_comments          => NULL,
    p_source            =>
'select country_name, country_iso_code from countries
where country_iso_code like :code order by country_name'
);
```

URI: <http://o-c-a.com/ords/admin/neural/nw1>

Enable REST : Parameter - bind variable handler

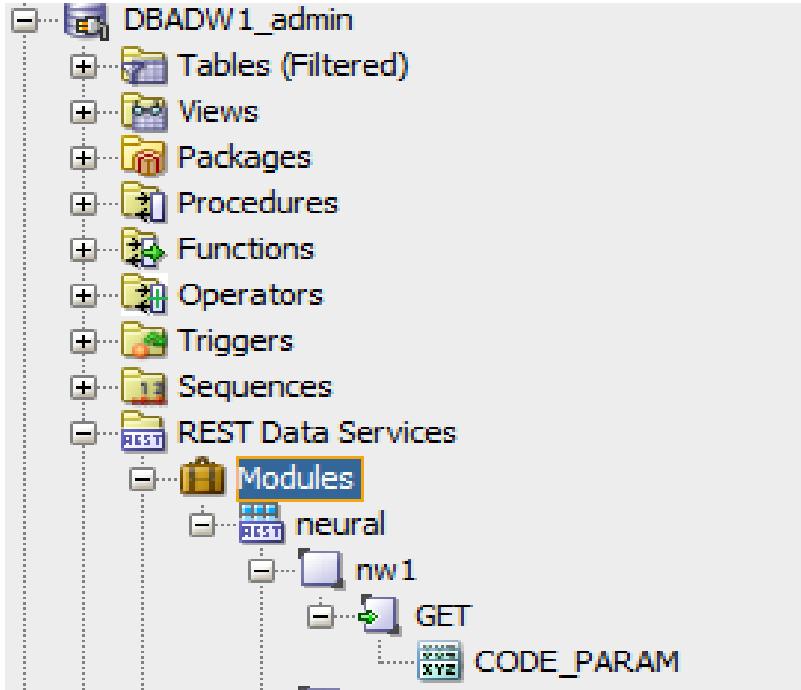

```
ORDS.DEFINE_PARAMETER(  
    p_module_name          => 'neural',  
    p_pattern               => 'nw1',  
    p_method                => 'GET',  
    p_name                  => 'CODE_PARAM',  
    p_bind_variable_name   => 'code',  
    p_source_type           => 'HEADER',  
    p_param_type            => 'STRING',  
    p_access_method         => 'IN',  
    p_comments              => NULL);
```

URI: <http://o-c-a.com/ords/admin/neural/nw1?code=>

Do it all in SQL Developer

URI: <http://o-c-a.com/ords/admin/neural/nw1?code=>

Use the URI with "curl" - Command-line URL

<http://o-c-a.com/ords/admin/neural/nw1?code=IT>

```
curl -i -k https://o-c-a.com/ords/admin/neural/nw1?code=IT
```

```
{"items":[{"country_name":"Italy","country_iso_code":"IT"}],"hasMore":false,"limit":5,"offset":0,"count":1,"links":[{"rel":"self","href":"https://vw8qjvz6dngfihi-dbadw1.adb.uk-london-1.oraclecloudapps.com/ords/admin/neural/nw1?code=IT"}, {"rel":"describedby","href":"https://vw8qjvz6dngfihi-dbadw1.adb.uk-london-1.oraclecloudapps.com/ords/admin/metadata-catalog/neural/item"}, {"rel":"first","href":"https://vw8qjvz6dngfihi-dbadw1.adb.uk-london-1.oraclecloudapps.com/ords/admin/neural/nw1?code=IT"}]}
```

Use the URI - in Firefox to display the JSON nicely

<http://o-c-a.com/ords/admin/neural/nw1?code=>

<https://o-c-a.com/ords/admin/neural/nw1?code=IT>

```

Understanding, Building and Using Neural Network Machine Learning Models using Oracle 18c

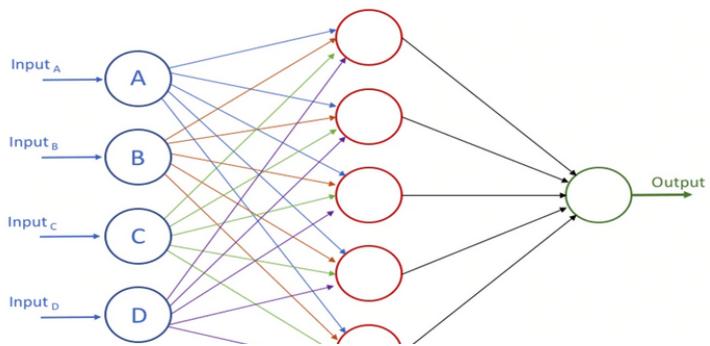

by Brendan Tierney, Oracle Groundbreaker Ambassador & Oracle ACE Director⁷

Oracle 18c Database brings prominent new machine learning algorithms, including Neural Networks and Random Forests. While many articles are available on machine learning, most of them concentrate on how to build a model. Very few talk about how to use these new algorithms in your applications to score or label new data. This article will explain how Neural Networks work, how to build a Neural Network in Oracle Database, and how to use the model to score or label new data.

What are Neural Networks?

Over the past couple of years, Neural Networks have attracted a lot of attention thanks to their ability to efficiently find patterns in data—traditional transactional data, as well as images, sound, streaming data, etc. But for some implementations, Neural Networks can require a lot of additional computing resources due to the complexity of the many hidden layers within the network. Figure 1 gives a very simple representation of a Neural Network with one hidden layer. All the inputs are connected to a neuron in the hidden layer (red circles). A neuron takes a set of numeric values as input and maps them to a single output value. (A neuron is a simple multi-input linear regression function, where the output is passed through an activation function.) Two common activation functions are logistic and tanh functions. There are many others, including logistic sigmoid function, arctan function, bipolar sigmoid function, etc.
